Education

Birmingham City University

September 2015 - July 2018

BSc Graphic Communicaiton Design - **First Class Honors**

Bio

User Experience Designer with 6+ years of experience creating intuitive, user-centred digital products across consumer tech, engineering, and travel industries. Skilled in leading the full UX lifecycle—from research and ideation to prototyping, usability testing, and developer handoff. Known for blending UX, UI, and motion design expertise to deliver engaging digital experiences that align with business goals and global standards. Now seeking a role where I can lead end-to-end design and help shape scalable, innovative digital platforms.

Core skills

UX & Research – User research, personas, workshops, journey mapping, usability testing

Design – Wireframing, prototyping, interaction design, motion design, typography, branding

UI & Visual – High-fidelity UI design, responsive layouts, accessibility, design systems

Collaboration – Cross-functional teamwork, stakeholder management, product strategy

Tools – Figma, Sketch, Adobe CC, Framer, After Effects, InVision

Experience

November 2025 - Current

UX & UI Designer - Syngenta

- Led the end-to-end design of an internal AI knowledge and productivity system, leveraging ChatGPT and other AI tools to support faster decision-making, improved knowledge discovery, and more effective ways of working across teams.
- Planned and conducted user research, usability testing, and moderated interviews, defining research goals, creating methodologies, and synthesising insights to validate AI use cases and guide product direction.
- Created and iterated user flows, wireframes, and high-fidelity interactive prototypes in Figma, focusing on clarity, explainability, and user trust in AI-generated outputs.
- Collaborated closely with product managers, engineers, data teams, and stakeholders to align AI system design with technical constraints, data governance, and business objectives.
- Worked in a fast-paced, ambiguous environment, rapidly prototyping, testing, and refining solutions while balancing innovation, usability, and responsible AI considerations.
- Communicated and defended design decisions using evidence-based insights, ensuring AI experiences were intuitive, scalable, and aligned with enterprise standards and user needs.
- Led the evolution of the AI design practice by defining workflows, sharing best practices, and embedding human-centred design principles into the end-to-end development of AI-powered products, ensuring solutions were usable, trustworthy, and scalable across the organisation.

June 2021 - June 2025
User experience designer - Dyson

- Led the end-to-end design of a product customization tool for Dyson Airwrap and Dyson Zone on figma. Translating complex user and business requirements into intuitive, high-performing digital experiences that boosted engagement and conversion rates.
- Planned and managed design deliverables under tight timelines, ensuring all solutions aligned with business objectives, adhered to technical feasibility, and met accessibility standards.
- Conducted user research and usability audits, combining qualitative and quantitative insights to guide design decisions, improve task completion rates, and enhance overall user satisfaction.
- Designed user flows, wireframes, and interactive prototypes in Figma, leveraging diverse design techniques to simplify complex journeys and improve accessibility for users with lower digital literacy.
- Presented and defended design solutions to cross-functional teams and senior stakeholders, using evidence-based insights to drive alignment and influence product direction.
- Facilitated collaboration between developers, researchers, and product managers to maintain design consistency, scalability, and adherence to Dyson's global standards.
- Contributed to the growth of the design practice by sharing user insights, design innovations, and process improvements that enhanced team efficiency and capability.

January 2021 - March 2021
UX & UI designer - Laracle

- Designed responsive web and mobile interfaces, creating both low- and high-fidelity wireframes to validate layout and interaction patterns, ensuring usability and accessibility across devices using Figma and Invision.
- Built complex and interactive prototypes with figma to test workflows with stakeholders, reducing iteration time before development and improving delivery efficiency.
- Led client discovery sessions to gather requirements, synthesising complex information into clear design solutions that balanced business objectives with user needs.

November 2019 - December 2020
Motion & digital designer - Atkins Global

- Created digital solutions and motion graphics across platforms, integrating UX and brand storytelling.
- Developed and maintained an in-house design system, ensuring visual and interaction consistency with figma.
- Facilitated workshops to capture user requirements and collaborated with cross-disciplinary teams.
- Balanced creative design with technical limitations, delivering scalable solutions on time.

December 2018 - July 2019
Junior digital designer - Journey Travel

- Designed digital campaigns and core webpages for luxury hotels (e.g., Alexander House, Number 31).
- Delivered user-focused e-booking experiences by mapping content strategy and testing user flows.
- Collaborated with copywriters and creatives to align storytelling with conversion goals.
- Conducted usability testing and audits, generating data-driven recommendations to refine designs and improve task completion and satisfaction rates.
- Planned and managed deliverables under tight deadlines, ensuring designs were delivered on time and aligned with project goals.
